Basic Characteristics
Mounting . . . Pipe or subplate mounting
Unloading pressure . . . . Up to 210 bar
(3000 psi)
Rated flow . . . . . . . . . Up to 246 L/min
(65 USgpm)
Method of actuation . . Internally piloted

General Description
Unloading relief valves are primarily used in hydraulic circuits incorporating accumulators where a pressure regulator is required to automatically unload the pump when the pressure reaches the pre-adjusted pressure setting of the valve.

When the pressure has dropped to approximately 85% of the valve setting the valve spool closes, thus diverting the pump delivery to the accumulator.

On the EURG models an integral check valve prevents return flow from the accumulator through the unloading valve; for the EURT model to provide this function a separate right angle check valve, model C2-815 (3/4") or C2-825 (1 1/4") must be provided.

These valves may also be used with a double pump to deliver a large volume of oil to the system at low pressure and a small volume at high pressure, serving the same function as a separate unloading valve and check valve.

### Applications

1. **Single pump/accumulator system**

2. **Double pump system**

Note that the EURG1 model shown in both systems can be replaced by the EURG2 or an EURT** plus the external check valve.

Hydraulic Fluids
All valves can be used with antiwear hydraulic oils, water-in-oil emulsions and water-glycols. Add prefix “F3” to model designation when phosphate ester (not alkyl-based) or chlorinated hydrocarbons are to be used.

The extreme operating viscosity range is from 860 to 13 cSt (4000 to 70 SUS), but the recommended running range is 54 to 13 cSt (245 to 70 SUS).

For further information about fluids see leaflet 694.

* To obtain optimum service life from both fluid and hydraulic system 65°C (150°F) normally is the maximum temperature except for water-containing fluids.

For synthetic fluids consult manufacturer or Vickers representative where limits are outside those for petroleum use.

Whatever the actual temperature range, ensure that viscosities stay within the limits specified in the “Hydraulic Fluids” section.

Contamination Control Requirements
Recommendations on contamination control methods and the selection of products to control fluid condition are included in Vickers publication 9132 or 561, “Vickers Guide to Systemic Contamination Control”. The book also includes information on the Vickers concept of “ProActive Maintenance”. The following recommendations are based on ISO cleanliness levels at 2 µm, 5 µm and 15 µm. For products in this catalog the recommended levels are: Up to 210 bar (3000 psi) . . . . . 19/17/14

When a subplate is not used, a machined pad (as indicated by shaded area) must be provided for mounting. The pad must be flat within 0.013 mm (0.0005 in) and smooth within 1.6 μm (63 microinch). Mounting bolts provided by the customer should be Class 12.9 (ISO 898) or better.

**Mounting Attitude**

Optional.

**Ordering Procedure**

Before ordering check availability with the Vickers representative. Valves, subplates and bolt kits are supplied as separate items and must be ordered as such, e.g.:

- 2 off -EURG1-06-B-13-UG valves
- 2 off -EURG1M-06-20-R subplates
- 2 off -BKUR-682M bolt kits

If a EURT valve is required then a check valve is also needed and must be ordered separately. The check valves recommended are C2-815 (3/4") or C2-825 (11/4"). For further details of these valves refer to leaflet 2334.
